

WE ARE ALWAYS INVESTING IN OUR FUTURE
TOWARDS RESPONSIBLE PRODUCTION
AND A STRONG FOCUS ON ENVIROMENTAL WELL-BEING.

Campedelli
MARBLES FROM THE HEART OF THE EARTH

CAMPEDELLI MARMI

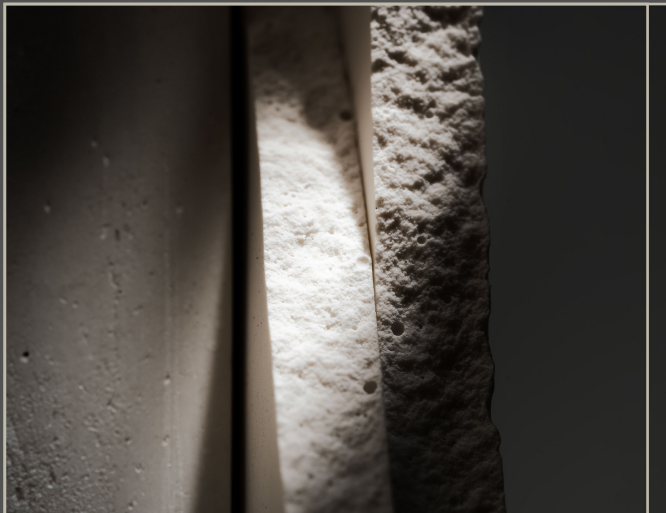

The quality of our work also stems from our expertise: we have been operating in the international marble market since 1967. All our staff are highly qualified and fully capable of working with design studios, purchasing departments, general contractors, and commercial intermediaries. We select and process the finest marble for projects and surfaces of any size.

Our company structure is lean and highly efficient: Reception, Sales Office, Administration Office, Shipping Office, Production Department, and Quality Control.

Today, Campedelli Marmi offers and exports 15 types of continuous marble to all the Gulf countries—Oman, United Arab Emirates, Saudi Arabia, Qatar, Bahrain, Kuwait, Iraq, and Iran—as well as to several Mediterranean-facing nations such as Libya and Tunisia.

We are recognized and appreciated for the high quality of our marble, the precision of our processing and finishes, the punctuality of our deliveries, and the overall reliability of our company.

Of course, our flagship remains our strong commitment and readiness to offer innovative and tailor-made solutions to meet our clients' needs.

15 Continuous Varieties of Natural Stones.

2 Environmentally friendly production areas

Thanks to the establishment of a second production facility near our historic headquarters, Campedelli Marmi has expanded its operations with approximately 1,200 square meters of covered space and 7,500 square meters dedicated to storage. This expansion has increased our daily production capacity by 1,200 square meters, bringing the total to over 2,000 square meters of finished products ready for shipment.

Our production department is equipped with advanced cutting and finishing machines capable of handling any project requirements, along with heavy-duty equipment for material handling and storage. All production lines are manufactured in Italy and are characterized by high construction quality, advanced technology, and low environmental impact. These features minimize electricity consumption and reduce raw material waste.

We regularly update our machinery to leverage new technologies that enhance both quality and quantity of production. Additionally, our staff receives continuous training on new equipment and is educated on the increasingly important standards for workplace safety and environmental health.

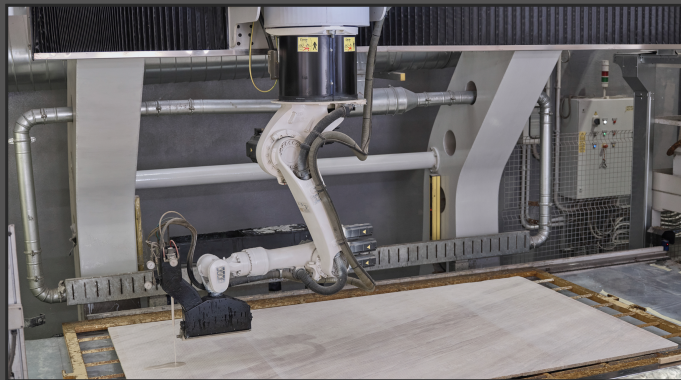

**High efficiency and sustainability
throughout the entire supply chain.**

COSTANT INNOVATION

Campedelli Marmi has always looked to the future, firmly believing that innovation ensures tangible improvements in production performance and in strengthening its competitiveness on the market. But it doesn't stop there: a full digitalization of the entire supply chain has provided a real-time, global view of the company, increasing efficiency in order planning, production monitoring and control, and helping ensure the quality of the finished product and the precise scheduling of deliveries.

Environmental and social aspects have also benefited from this commitment – from the repurposing of processing residues to the professional growth of team members responsible for operating and maintaining the various machines.

To achieve these goals, Campedelli Marmi has relied on the collaboration of the best and most renowned companies specialized in the design, construction, and fine-tuning of bespoke machinery and software for stone production and processing.

Continuous investments in machinery and personnel.

CIRCULAR ECONOMY AND RESPECT FOR THE ENVIRONMENT.

There was still no strong sentiment towards environmentalism and the circular economy, but the concept of safeguarding our beloved planet as much as possible was already more than evident in Campedelli Marmi's growth programs from its very inception. Over the years, the installation of solar panels, continuous modernization of machinery and equipment, and the constant training and qualification of staff have allowed for continuous development, both in terms of production quality and the quantity of finished products ready for shipment. Yet, all this effort was not enough. The final link in the chain was missing: securing the by-products generated from the various processes. After thorough research, the suitable site was finally found. With all the necessary permits obtained, the new Campedelli Marmi by-product storage center was inaugurated, capable of supporting the growing production for the near future. It became the first Italian company to be registered as both a producer and consumer of by-products at the Verona Chamber of Commerce.

Daily commitment, concrete and tangible.
